

**FSIZE(c)**

**FSIZE(c)**

**NAME**

fsize — get size of file

**SYNOPSIS**

fsize = 19.

**ARGUMENTS(input)**

capability associated with file

**VALUES(returned)**

- 1 - high order word of 32-bit size
- 2 - low order word of 32-bit size

**DESCRIPTION**

The size of the file specified by the capability is returned as a two-word value. This message type is typically used to get size of file when a seek beyond the end of the file is requested by a UNIX user.

**SEE ALSO**

stat(c), fstat(c).
