Dayna MAIL

Electronic Mail For The Macintosh And IBM PC

Electronic Mail For Well Connected Businesses.

You've heard all about the benefits of electronic mail and how it's going to change the way people communicate around the office. No more telephone tag, no more overflowing in-boxes, no more scattered messages that you can never find again.

It's all true. But what you don't hear about are the limitations that plague most mail applications.

Introducing DaynaMAIL™. All the productivity you expect from electronic mail with all the connectivity your business needs.

DaynaMAIL is an electronic mail application for Apple,® Macintosh® and IBM® personal computers and compatibles. It allows Macintosh and PC users to send and receive messages across local area networks such as DaynaNET™, AppleShare,® TOPS,® 3+® and NetWare® for Macintosh. It can be used as a server-based or node-based application, so it works equally well over file server-based or distributed networks.

More than just a mail application, DaynaMAIL is a business communications tool that acts almost like a personal assistant.

DaynaMAIL automatically sorts your incoming mail by person, date and topic. It alerts you when you receive urgent or registered mail that requires your immediate attention. It files replies with the original message so that a running conversation is kept of an entire exchange.

DaynaMAIL gives you a personal address book in which to enter the people and work groups you correspond with. You can import an entire address book full of names or export your address book for other people to use.

Other features such as the ability to save message drafts for later completion, carbon copy or blind copy, and registered and urgent delivery of mail, increase the ease and flexibility of interoffice communication.

But when you need more than just interoffice communication, DaynaMAIL can connect your personal computer with more places than you ever thought possible.

For businesses that need to communicate beyond the local area network, DaynaMAIL can provide wide-area connectivity to other applications running on other networks. In conjunction with MHS™—a wide area message handling software package—DaynaMAIL can communicate with other MHS-compatible applications such as the Coordinator™ and Framework III™. And via the Soft-Switch® MAILbridge Server/MHS, DaynaMAIL can communicate with applications such as IBM's PROFS,® DEC's ALL-IN-1,® and more.

DaynaMAIL. All the productivity you need. All the connectivity you want.

Dayna

† Soft-Switch MAILbridge Server/MHS from Soft-Switch needed.

DaynaMAIL Specifications

DaynaMAIL for the Macintosh

PHYSICAL DESCRIPTION:
– Five-user packs
– Six 3.5" disks (5 user, 1 administrator)
– Documentation

COMPUTERS SUPPORTED:
– Apple Macintosh Plus
– Apple Macintosh SE
– Apple Macintosh II
– Apple Macintosh IIx

SYSTEM REQUIREMENTS:
– Macintosh (Plus, SE, II) computer
– System 6.0, Finder 6.1
– 1 Megabyte of RAM
– Local hard drive

NETWORK OPERATING SYSTEMS SUPPORTED:
– DaynaNET from Dayna Communications, Inc.
– AppleShare from Apple Computer, Inc.
– NetWare from Novell, Inc.
– 3+ from 3Com
– TOPS from TOPS, A Sun Microsystems Co.

SUGGESTED U.S. RETAIL PRICE:
– $295.00 per 5-user pack

DaynaMAIL for IBM PCs and Compatibles

PHYSICAL DESCRIPTION:
– Five-user packs
– Six 5.25" diskettes (5 user, 1 administrator)
– Documentation

COMPUTERS SUPPORTED:
– IBM PC or compatible
– IBM XT or compatible
– IBM AT or compatible
– IBM PS/2

SYSTEM REQUIREMENTS:
– IBM personal computer/compatible
– MS-DOS
– 512K of RAM
– Local hard drive

NETWORK OPERATING SYSTEMS SUPPORTED:
– DaynaNET from Dayna Communications, Inc.
– AppleShare from Apple Computer, Inc.
– NetWare from Novell, Inc.
– 3+ from 3Com
– TOPS from TOPS, a Sun Microsystems Co.

SUGGESTED U.S. RETAIL PRICE:
– $295.00 per 5-user pack
